PROBLEM 3: STRING REVERSAL : 10.0 POINTS

PART B: Recursion

The file `ps5_recursion.py` contains the skeleton code for the next three problems.

Fill in the function `reverseString(aStr)` according to the specification. The only string operations you are allowed to use are indexing, slicing, and concatenation.

This function has to be recursive! You may not use loops (`for` or `while`) to solve this problem.

```
1  def reverseString(aStr):
2      """
3      Given a string, recursively returns a reversed copy of the string.
4      For example, if the string is 'abc', the function returns 'cba'.
5      The only string operations you are allowed to use are indexing,
6      slicing, and concatenation.
7
8      aStr: a string
9      returns: a reversed string
10     """
11     ### TODO
12
```

Unsubmitted

Note: In programming there are many ways to solve a problem. For your code to check correctly here, though, you must write your recursive function such that you make a recursive call directly to the function `reverseString`. Thank you for understanding.
