## INTRODUCTION

In this problem set you will write a solution to an optimization problem on how to find the shortest route from one building to another on the MIT campus given that you wish to constrain the amount of time you will spend walking outdoors (because generally speaking, the nocturnal beaver... er, the nocturnal MIT engineer... hates the sun).

## GETTING STARTED

Download Files: Problem Set 10 skeleton code. (/static/content-mit-600x~2012\_Fall/files/templates/ProblemSet10.28df39536b6d.zip) This zip archive includes the following files:

1. `ps10.py`: code skeleton
2. `graph.py`: a set of graph-related data structures (Digraph, Node, and Edge) that you can use
3. `mit_map.txt`: a sample data file that holds the information about an MIT campus map.
